Time-Saving Service Resets & Relearns with Latest Snap-on Software Release

LINCOLNSHIRE, Ill., Nov. 30, 2020 – One of the new time-saving and productivity-enhancing features included in the fall Snap-on® diagnostic software release is the Service Resets & Relearns feature for ZEUS®, TRITON-D₈®, APOLLO-D₉™, APOLLO-D₈™ and VERUS® Edge. This Snap-on exclusive offers a smart approach to a quicker and more comprehensive solution to complete a repair by providing procedures like functional tests, resets and relearns related to the service selected.

The Service Resets & Relearns feature automatically checks top repairs from SureTrack® expert information, plus technical service bulletins (TSBs) to ensure a complete fix. When replacing a component or simply starting a service, technicians can be confident their tool will return all resets and relearns that must be performed to successfully carry out the repair.

Because it eliminates the time it takes to perform research manually, the Service Resets & Relearns feature allows technicians to focus on getting the repair finished fully, accurately and quickly.

For more information about the latest software coverage and features or available software programs, contact a participating Snap-on Franchisee or other sales representative, or visit <https://snapon.com/diagnostics/SRR>.

About Snap-on Diagnostics:

Snap-on Diagnostics is part of Snap-on Incorporated, a leading global innovator, manufacturer and marketer of tools, diagnostics and repair information and systems solutions for professional users performing critical tasks.
