Snap-on Must Have Tool: TPMS3 Tests TPM Sensors, Relearns TPM Systems

KENOSHA, Wis. – April 26, 2011 – Every day one of your customers asks you about the “horseshoe with the exclamation point inside it” symbol lighting up on their dashboard. You know the answer and need to determine what is causing the TPM warning light to illuminate. That’s why Snap-on’s TPMS3 Tire Sensor System Tool is necessary if you plan on doing any TPMS work.

“Every auto repair shop, tire store, body shop, quick lube and rental car-fleet repair shops should be using the Snap-on TPMS3,” said Mike DeKeuster, product manager for Snap-on. “Doing TPMS work has its own diagnostic needs and having the right tool is imperative if you want to perform this work quickly and efficiently. If you work on vehicles that have tires, this tool is a must have.

“Not only does the TPMS3 give you sensor diagnosis and the ability to relearn TPM systems, it also offers a database of information right at your fingertips. This feature allows the user to access vehicle-specific relearn procedures without having to consult a repair manual. This saves the technician time in performing relearn (or reset) procedures after a tire rotation or sensor replacement.”

The Snap-on TPMS3 has the following features:

- Comprehensive domestic, European and Asian coverage
- Model-specific sensor testing and verification – displays sensor information on-screen
- Step-by-step relearn procedures built into the tool – no need to consult repair manual or software
- Reprogram sensor ID into ECU with included OBDII connector for Asian vehicles
- Tests wireless Key FOBs for proper operation and signal strength
- Built in lithium ion rechargeable battery
- Updateable via USB and PC

Customers can find out more about Snap-on’s TPMS3 by contacting their Snap-on franchisee or representative, visiting www.snapon.com or by calling toll free 877-SNAPON-2 (877-762-7662).
