### An Unequaled Opportunity

When we introduced our set building program it revolutionized the industry — for the first time there was a planned way for technicians to build their tool inventories as they developed skills and responsibilities.

The popularity of this program is still growing. It is designed to target the most used tools in the most likely progression. And as metric tools become the standard of the service bay, we offer a greatly expanded metric selection with a big set that tops any available anywhere else.

Ask your Snap-on® representative for more information on how you can build the set you dream of with the right plan.

### How Does the Program Work?

The 9100GSBO Apprentice Set includes a well balanced selection of 1/4", 3/8", and 1/2" square drive tools, wrenches, screwdrivers, pliers, punches, and chisels — a basic set for routine maintenance work. As your needs grow, add the second tool group (9000GS2), providing more than 100 additional standard and special application tools. These first two steps give you the equivalent of the 9200GSB (Set 2) in the KRA2055 Tool Chest or a choice of an optional tool chest — the KRA4059. And remember, the most needed metric tools are also included throughout the set building program. When it's again time to expand, just add the next tool group.

Through this method of steady, planned expansion you can continue building your U.S. and metric tool inventories until you achieved the ultimate selection of matched hand tools and storage units.
