

# Advanced Technology Lab™

## High Tech On Wheels!

The Advanced Technology Lab™ from Snap-on Industrial – it's as unique as the technology it displays.

Snap-on Industrial has developed the Advanced Technology Lab™ to help demonstrate and show some of the key product and system innovations available to you.

It's all about solutions. We don't use technology for its own sake - we use technology to solve problems. Problems like FOD (Foreign Object Damage) and FME (Foreign Material Exclusion), which can bring a manufacturing or maintenance operation to its knees. Problems like missing tools causing downtime. Problems like operator safety and ergonomics.

The best way to experience these solutions – the Advanced Technology Lab™ – only from Snap-on Industrial.

# Innovation Starts Here<sup>SM</sup>

**Come inside this unique lab and see how Snap-on Industrial uses the latest in technology to solve key problems in your workplace.**

**Advanced Tool Control Systems** - a box so smart it knows where your tools are - complete with machine vision and keyless entry systems to control access.

**See the Asset Management Program** - used by the airforce and hundreds of other locations to easily manage their tool cribs.

**Tools at Height Retention System** - designed to increase safety and productivity, and prevent loss and injuries resulting from tools falling when used in high places.

**The Aeroprobe** - which can find a lost tool through the skin of an aircraft.

**The Revolutionary TechAngle® Torque Wrench** - revolutionary technology achieves torque plus angle tightening sequences. Combines electronic torque wrench with gyroscopic-based angle calculation.

**See the latest in torque measuring and calibration.**

**New innovative hand and power tools.**

## The Simple Genius of Snap-on Level 5™

**Organization**  
**Visibility**  
**Security**  
**Trackability**  
**Accountability**

**Networked Tool Control**  
**Keyless Entry**  
**Tools at Height Retention System**  
**TechAngle® Torque Wrenches**

See how Snap-on Industrial uses advanced digital imaging technology and proprietary software to keep track of your tool inventory, record which tools are removed and replaced, by user, and when.
