ADDITIONAL INFORMATION

Internet communication is confined to proprietary data services, which require OAuth authentication, and currently employ HTTP.

At rest encryption: Documents are not encrypted at rest, but are only accessible from outside the hosting environment via a set of Data and File Management services that are protected by our OAuth2.0 based security services. Credentials are allocated to individual technicians and devices.

Cloud services are hosted via a Primary Data Center in San Diego and a Disaster Recovery Data Center in San Jose. The software infrastructure consists of Windows 2019 running IIS 10 for the Web Servers (which support the related Data Services), SQL Server 2016, and an ISOLON Object Store. The Hardware and Network infrastructure upgrade cycle is 3 years.
