THERNAL LASER

AS LOW AS

WITH TRADE

2 in 1 tool combining Thermal Imaging and Thermal Laser functions:

- Helps to identify the fault quickly
- Supports image blending
- Helps to pinpoint the exact location of the fault

Measures temperature up to 1800°F in laser mode, great for diagnosing and troubleshooting catalytic converters, exhaust manifolds and DPFs Delta feature in laser mode, for capturing high and low readings as well as their difference (delta), ideal for checking inlet and outlet temperatures of catalytic converters
