Snap-on Introduces a New Software Diagnostic Suite for VERUS® *Changing the Way Professional Technicians Work*

LINCOLNSHIRE, Ill., Nov. 10, 2010 – Snap-on's new Software Bundle 10.4 for the VERUS® Diagnostic and Information System will forever change the way that professional technicians go about their work. VERUS owners can now get to where they need to be up to 50 percent faster with an easy-to-use, icon-based interface that offers simplified organization, a roomier display and larger buttons. VERUS' new design offers quicker navigation with fewer clicks so technicians can get more done in less time.

"Technicians will marvel at how easy it is to use VERUS," said Bill Bruno, vice president of sales and marketing for Snap-on Diagnostics. "On the home screen, you get the VERUS applications that you use most often. With one touch, go to the scanner module, global OBD, stored vehicle history and information resources such as ShopKey5 and data manager. The end result of all this navigational flexibility is that VERUS and Software Bundle 10.4 will take you to more answers faster."

New features include:

- Snap-on's Automatic Vehicle Record Generator helps technicians easily ID the vehicle and do it more quickly as part of the Scanner or Component Test Meter module workflow.
- Fingertip controls enable VERUS owners to easily change PIDs to graphs, plus scroll to move and view multiple PID graphs. Also, with a touch of a finger they can size windows, set triggers, auto-scale, and work the record and playback features.
- Technicians will find that the VERUS Component Test Meter (CTM) and Lab Scope have large, expandable displays and easy-to-use settings. For example, the CTM's main window displays the meter and scope settings simultaneously. To access controls and settings, press the Data button. To expand or maximize this section, just tap it. Only Snap-on offers this unique Touch and Grow™ feature.
