Snap-on's New Software Bundle 9.4 Makes it Easier Than Ever to Perform GM Alignments

LINCOLNSHIRE, Ill., Feb. 26, 2010 – Snap-on's Software Bundle 9.4 makes it easier than ever for professional technicians to perform GM alignments because it eliminates the need for the GM factory tool. With the latest upgrade, technicians can complete alignments for the 2004-09 Chevrolet Malibu, the 2005-09 Pontiac G6 and the 2007-09 Saturn Aura. The GM CAN steering module coverage includes codes, data and functional tests, such as steering position sensor calibration, steering tuning and selection torque sensor calibration.

"This coverage is considered a 'must' for any alignment shop, especially since more and more vehicles have electric power steering (EPS)," said Chris Hockett, product manager for Snap-on Diagnostics. "Snap-on's Software Bundle 9.4 offers alignment technicians the GM CAN steering module coverage that they need to perform the complete alignment job. Plus, there's a good chance technicians will use this coverage before the vehicle's malfunction indicator light ever comes on."

Snap-on's Software Bundle 9.4 also includes 45,000 new enhancements to codes, data and tests, plus new and expanded Troubleshooter tips that go back to 1981. It offers more diagnostics power for the vehicles that technicians see in their shops most often, as well as new vehicle coverage for every model year from 1998-2009 with access to over 12,000 new systems, 10,000 more trouble codes and over 8,000 new live data parameters.

To see all the vehicle platforms and systems covered in Bundle 9.4, ask a Snap-on representative to see the Snap-on vehicle coverage guide or visit the Web site at <http://diagnostics.snapon.com/software>.
