Snap-on Introduces MODIS™ Edge

Say “Hello” to Confidence

LINCOLNSHIRE, IL, Aug. 29, 2016 – MODIS™ Edge from Snap-on® is a combination full-function scan tool and scope/graphing meter that delivers new features, plus the powerhouse speed and performance that professional technicians expect from a complete diagnostic tool.

In order to be the best in the repair services, technicians and shop owners need an edge to work faster and work smarter. MODIS Edge, with a five-second boot-up and the new Instant ID feature that automatically reads the VIN upon connection to the vehicle, gets technicians right to work. The nine-foot lighted OBD cable makes connection to the vehicle fast and easy. The dedicated SMX operating system and quick links to common procedures, such as oil specs and service interval resets, means swift results. In addition, the finger-driven, eight-inch color touchscreen and four-way thumb pad allows for quick navigation.

When it comes to performance, MODIS Edge is ahead of the pack. The Vehicle System Report, for 2008 and newer vehicles, displays a complete view of diagnostic results for all available systems that can be printed for more convincing customer estimates. Exclusive Guided Components Tests show how to test, where to connect and what results to look for so technicians can verify the faulty part and move quickly to the repair. MODIS Edge can also display up to eight live data parameters onscreen at one time in digital format and provides extended Wi-Fi range to speed triage functions and increase productivity in the bay.

With expert diagnostics, the MODIS Edge will eliminate guesswork. Technicians have access to 48 vehicle makes and over 100 vehicle systems with coverage including OEM-specific codes, live data graphing, functional tests, and relearns and adaptations. Comprehensive coverage is available for Asian, domestic and European vehicles, as far back as 1980. MODIS Edge includes exclusive SureTrack® expert information which offers verified parts replacement records and Real Fixes in a straightforward Complaint/Cause/Correction format. SureTrack is harvested from millions of successful repair orders so technicians can fix it right the first time. Convenient online software upgrades for MODIS Edge are available through the software subscription plan.

“Our promise to customers is we will keep pace with the dynamic auto industry. We will continue to enhance and improve our diagnostic equipment. We will ensure that every investment that technicians make with us is the most sophisticated, advanced technology solution available,” said Leian Wunderlich, marketing manager, Snap-on Diagnostics. “The new MODIS Edge follows this promise, giving technicians the confidence that they can handle any job that comes in.”

Snap-on online support is available 24/7 at <http://diagnostics.snapon.com/FAQ>. Experienced Snap-on Customer Care representatives are available to provide support in English and Spanish on the Customer Care Hotline at 800-424-7226 or e-mail diagnostics_support@snapon.com.
