CUSTOM KITTING

Let Snap-on help reduce your costs and increase productivity by designing a customized kitting solution for you. Competitive pressures are forcing many companies to look for ways to streamline operations, reduce time to market and lower inventories.

Kits can also provide inventory control for safety and theft prevention purposes by ensuring that you can account for every item in the kit at a glance. This type of tool control system can be applied to any type of tool kit.

Any tools that you regularly gather together for a specific task or activity can be organized into a kit for rapid access and ease of use.

By grouping these tools into a specifically designed tool storage unit, bag, case, or container you always know you have what you need for that job.

NEW AND VALUABLE TOOL SERVICE

It not only pays to have the right tools for keeping your car in repair, but it is a real service when the manufacturer furnishes with a set of wrenches, a diagram of the car showing just which nuts and bolts each wrench in the set is for. That is what the Snap-On Wrench Company offer in this new set of Snap-On Interchangeable Socket Wrenches especially selected for the Ford Car.

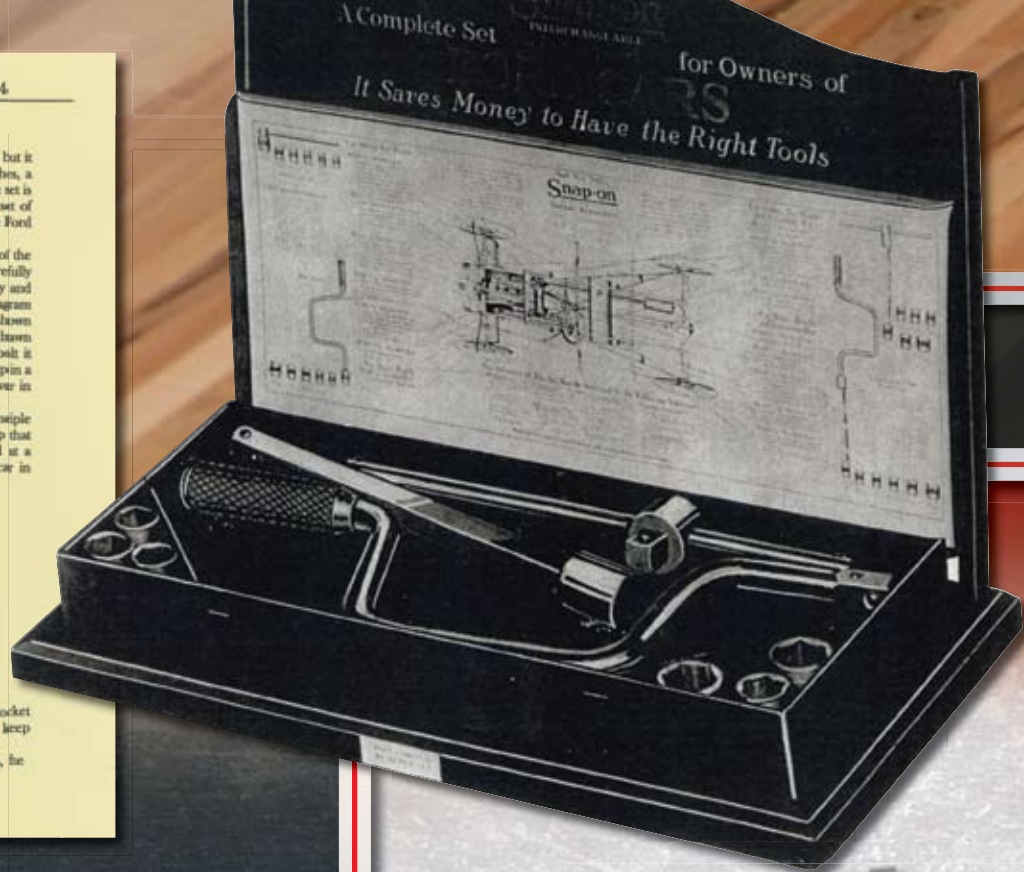

In making up this set of tools, it is said that engineers and officials of the Snap-On Company went direct to the Ford factory at Detroit and carefully worked out the different wrench combinations that would most easily and quickly reach and turn the nuts and bolts throughout the Ford. The diagram is pictured in the list of the box. At the ends of the card the tools are shown with a list of nuts for which each tool is designed. A tiny red line is drawn from each name in the list to the location in the car of the nut or bolt it represents. This chart is on strong cardboard so that it may be tacked upon a convenient place in the garage. By referring to it the car owner is never in doubt as to what wrench he needs for any job.

The compactness of the set is a big feature. The interchangeable principle of Snap-On Wrenches has been so effectively applied in its make-up that the Ford owner, with the few Snap-On units illustrated, is provided at a surprisingly low cost, with tools which enable him to overhaul his car in garage style.

The handy box is of heavy sheet metal with hinged cover, separate socket compartments and finished in green enamel. It offers an ideal way to keep the tools safe against loss, rust, and abuse.

If there is no dealer near you we suggest that you write the distributors, the Motor Tool Specialty company, 14 E. Jackson Blvd., Chicago, Ill.

Snap-on first designed a custom tool kit with Ford Motor Company in the 1920's. Snap-on and Ford Motor Company engineers met and designed a custom tool kit for the Ford Model T. A specific tool was designed for every nut and bolt on the Model T. Snap-on has been investing in and increasing that core competency ever since.
